

The modelling user study

Thank you for participating in the modelling user study.

Introduction

The Dataspecer tool enables users to model a tree-like data structure based on an input ontology. The data structure can be used to generate various software artifacts. The ontology is a set of classes and properties. Properties are divided on attributes (a value is a literal) and associations (a value is a class). The data structure creation starts with a root selection. Then the user models the data structure by adding properties of the root class. If the properties are associations, the user continues recursively on their endpoint classes.

Your Task

Your task is to model three data structures based on their descriptions listed below. For each description, you will create one data structure using the Dataspecer tool.

Step-By-Step Instructions

1. Create a data specification in the Dataspecer tool.
 1. Open [the Dataspecer tool](#).
 2. Click on the "Create Specification" button, **enter the label "modeling-study"** and confirm.
 3. In the "Vocabulary sources", **select Wikidata** and click on the button "Save".
2. For each domain description listed in this [Google file](#) do the following:
 1. Click on the "Create Data Structure" button at the top of the data specification page.
 2. Click on the "Set Root Element" at the top right corner.
 3. **Copy the IRI of the root class from the Google file into the input box.**
 4. Select the class as a root by clicking on it.
 5. Model the data structure by clicking the "[+]" button next to the class names (you need to hover over it).
 1. Select appropriate properties, then click Confirm.
 2. Repeat recursively on the added properties until you complete the task.
 3. **Model the data structure for 15 minutes maximum.**
 4. When you are finished or the time expires, click on the "Back to specification manager" button in the upper left corner and move to the next modeling task. If you receive an error, just click the back button in your browser twice, that should return you to the manager.
3. After you finish all the modelling tasks, fill out the questionnaire below.

Surroundings Dialog Tips

- The left panel contains all ancestors of the class, the right panel contains properties of the class.
 - By clicking on the "*Include Inherited*", the properties listed will include also properties from ancestors.
 - Use the text search boxes to filter out properties or ancestors.
 - You can remove or modify the selected properties in the "*Manage Selected*" dialog.
 - You can also remove selection by closing the blue chip next to the property name.
 - By clicking on an ancestor in the left panel, the dialog will switch to the properties of the ancestor.
 - You can filter properties of a class by referencing an instance of the class.
 - You can open a detail of the property or the class, by clicking on the "(i)" button.

* Indicates required question

1. Characterize yourself *

Tick all that apply.

- ☐ A student
- ☐ A teacher
- ☐ A modelling expert
- ☐ A database expert
- ☐ A programmer
- ☐ A manager

2. I understood the modeling task about **Touristic Attractions**. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

3. I managed to finish the task about **Touristic Attractions** in the time limit (15 mins). *

Mark only one oval.

☐ Yes

☐ No

4. I understood the modeling task about **Scholarly Articles**. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

5. I managed to finish the task about **Scholarly articles** in the time limit (15 mins). *

Mark only one oval.

☐ Yes

☐ No

6. I understood the modeling task about **Albums**. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

7. I managed to finish the task about **Albums** in the time limit (15 mins). *

Mark only one oval.

☐ Yes

☐ No

8. I found it easy to understand the meaning of the classes and properties in the surroundings dialog. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

9. Information provided in the surroundings dialog was sufficient for me to select adequate properties. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

10. The surroundings dialog was sufficiently responsive. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

11. I found the surroundings dialog intuitive to use. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

12. The surroundings dialog enabled me to accomplish the tasks. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree

13. I would use the surroundings dialog again. *

Mark only one oval.

	1	2	3	4	5	
Fully	☐	☐	☐	☐	☐	Fully agree
